(54) Title: **GLASSES AND GLASSES LENSES FOR STEREOSCOPIC IMAGE AND SYSTEM USING THE SAME**

(57) Abstract: Glasses lenses for stereoscopic image and glasses using the same relates to a liquid crystal layer with flexible films formed on transparent electrode. This invention makes the lenses flexible, and by bending the lenses, fashionable glasses can be made. In this invention, the glasses' breakage has decreased because the film's material is unbreakable by impact and the viewer wearing the glasses is comfortable because of thin thickness and lightweight. Also, the glasses for stereoscopic image are equipped with a connector holder. Thus, in case of cable malfunction, a user only needs to change the cable, not the whole unit.
